

REMERGENT MICROCIRCULATION THERAPY

Skin Stimulating Cream

Liquidus Stimulator Cutis

- THE NEWS:** **Microcirculation Therapy** is for the treatment of underserved circulation exhibited as under-eye fatigue, chilled extremities, and pale complexion.
- PERFORMANCE:** A multi-faceted formula for localized treatment bolsters nutrient flow to the skin as it calms and hinders the irritation cycle. With regular use, resiliency is restored and the appearance of under-eye fatigue is relieved.
- THE DIFFERENCE:** Patented liposome delivery system encapsulates key ingredients in microscopic spheres which are engineered to deliver maximum benefit at the cellular level.
- THE BENEFIT:** Age-related decline in blood flow in the skin causes a reduction in nitric oxide production leading to dark under-eye circles and tired-looking skin. **Microcirculation Cream** is clinically proven to increase nitric oxide in skin cells, reducing the dark under-eye by 13 percent after two weeks.
- KEY INGREDIENTS:** **Pinoxide.** An exclusive and patented blend of breakthrough ingredients that stimulates nitric oxide production to improve circulation. Clinical studies prove Pinoxide speeds blood flow, warms the skin, increases resistance to cold, and reduces dark under-eye symptoms.
- Evodiox.** A biomimetic transcription of the ancient Chinese pain elixir Wu-Zhu-Yu, known to curb irritation and soothe aggravated skin. In clinical studies, the active components from the Evodia fruit have been shown to inhibit inflammation and reduce stress.
- Vitamin C** (in oil-soluble form). Formulated at concentrations for skin-strengthening, skin-brightening, and collagen-building, providing benefit to the lower orbital area.
- USAGE:** Apply one metered dose to localized areas twice a day to stimulate sluggish circulation. Recommended as a spot treatment for all skin types.

Microcirculation Therapy, 15 mL

\$70.00

Remergent is available through preferred dermatologists and plastic surgeons.
